

typescript

Next.js fails your **production build** (`next build`) when TypeScript errors are present in your project.

If you'd like Next.js to dangerously produce production code even when your application has errors, you can disable the built-in type checking step.

If disabled, be sure you are running type checks as part of your build or deploy process, otherwise this can be very dangerous.

Open `next.config.js` and enable the `ignoreBuildErrors` option in the `typescript` config:

 next.config.js

```
1 module.exports = {
2   typescript: {
3     // !! WARN !!
4     // Dangerously allow production builds to successfully complete even if
5     // your project has type errors.
6     // !! WARN !!
7     ignoreBuildErrors: true,
8   },
9 };
```
