src Directory

As an alternative to having the special Next.js `app` or `pages` directories in the root of your project, Next.js also supports the common pattern of placing application code under the `src` directory.

This separates application code from project configuration files which mostly live in the root of a project. Which is preferred by some individuals and teams.

To use the `src` directory, move the `app` Router folder or `pages` Router folder to `src/app` or `src/pages` respectively.

Good to know

- The `/public` directory should remain in the root of your project.
- Config files like `package.json`, `next.config.js` and `tsconfig.json` should remain in the root of your project.
- `.env.*` files should remain in the root of your project.
- `src/app` or `src/pages` will be ignored if `app` or `pages` are present in the root directory.
- If you're using `src`, you'll probably also move other application folders such as `/components` or `/lib`.
